

# THE EVEREST COLLECTION

Our Everest Collection is designed to fit many interior styles. It's sharp, modern design is meant to highlight interior architectural elements that would otherwise be overlooked. It's sharp angles emulate the peaks of mountains and help create a feeling of adventure.

These signs are created using our Z-Build process, where we print raised elements along the Z axis of a substrate. This creates a more stable, natural looking product.

### Sign Breakdown:

- 1/8" Satin Acrylic (Colors Specified on right)
- Raised Pictorial in White
- 1/8" Satin Black Acrylic
- Raised Compliant Text in White
- Raised Compliant Type II Braille in White

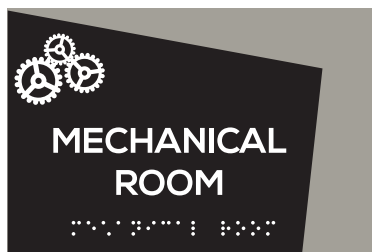

Signs in this collection come in 2 sizes; 6"x9" or 4"x6". The copy on the signs as well as pictorials are all created on a per project basis - Meaning, if your building needs a sign to say something that's not shown in this packet, it's no big deal.

The signs on the previous page are shown in Luxe Blue.  
Here's how they look in our other colors;

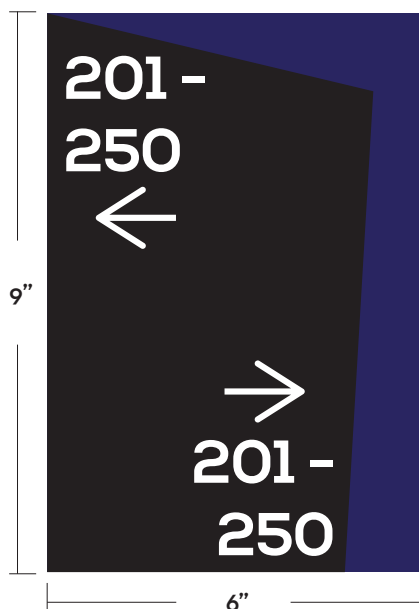

Cobalt Blue

Storm Grey

Bisque

This Collection can also be customized to fit **your** branding needs. Did you ever think ADA Signage could double as a marketing tool?  
Well, it can.

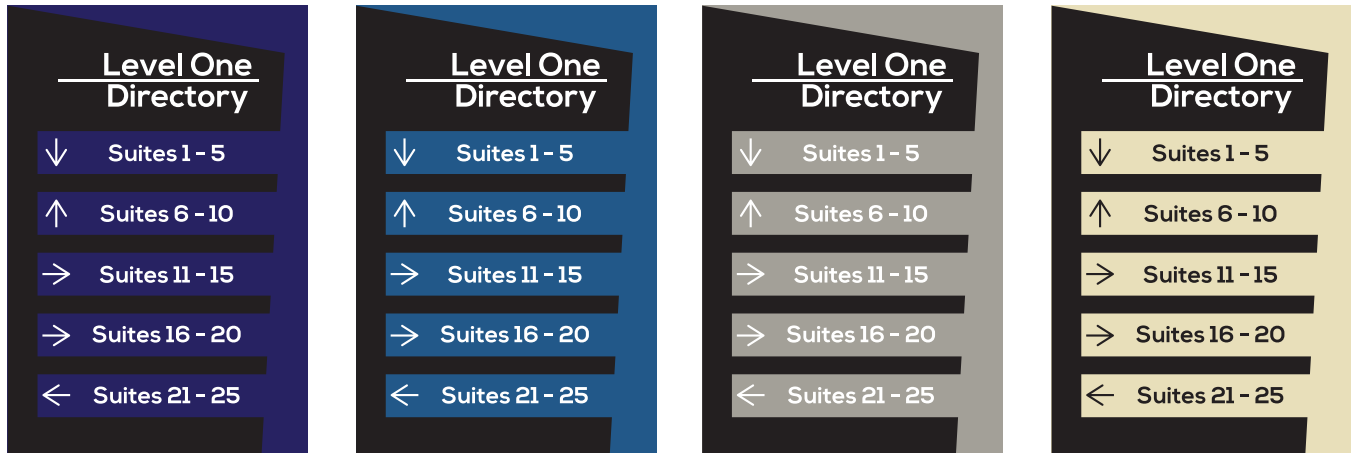

Our technology allows us to display your logo directly on the sign in full color and raised

No Collection could be complete without its own custom directory. This directory consists of 3 layers of acrylic, making it 1/2" thick all together.

The directory comes in a standard width, 14", but can vary in length depending on the number of "slats" needed per sign.

Again, the directory is available in 4 colors shown below.

### Directory Breakdown:
