TRADITION

From hand made to computer aided machines, signs have been designed and sculpted as early as Pompei, with designs carved in the street to lead you to food and entertainment.

We began creating hand crafted products in 1954 and acquired JC Awning in 1989. We carved motifs and lettering with chisels, hand worked and painted with meticulous care.

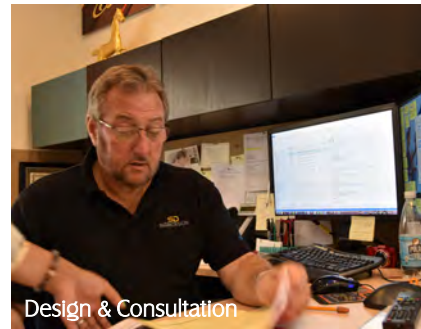

With the evolution of CAD/CAM machinery and the love of creating, we still embrace the history that brought us here.

DESIGN & FUNCTION

Design should always function to fulfill the needs of the client. Creative signage design will communicate the correct message, allow clients to find their way and simply make people feel good about the company or store they are visiting.

"In the end, great signage increases revenue"

-  Shopping Centers
-  Franchise & Rebranding
-  Project Management

FABRICATION

"Push the button and make the sign".
Some clients think its that simple.
However, today's manufacturing processes require many skills and the ability to program complex machinery.
Our custom work requires very skilled craftsman.

*"Pushing the button is easy!
Knowing which button to push takes knowledge"*

HAND VS MACHINE

Fabrication requires proper machinery but that pales in comparison to the ability of skilled craftsman.

Our incredible staff continues to impress us with their knowledge of our machinery and skills to work with many materials.

We are "Makers", skilled in woodworking, computer aided routing (CAD/CAM), welding, painting, electrical, 3D printing, laser cutting and a wealth of fabrication knowledge.

AWNINGS & STRUCTURES

SINCE 1954 JC Awning has been creating awning and fabric structures for residential and commercial clients. For 70 years we continue to learn from our original founders using new technologies that help us create cost efficient engineered structures.

Whether a country club, golf facility, retail store or home owner, we have designed, fabricated and installed awnings and structures to fit the rigorous needs of many types of clients.

-  Sidewall Systems

PERGOLAS & RETRACTABLES

Design should always be a function to fulfill the needs of the client. Creative awning design will communicate at the correct distance, allow the public to find their way or simply project a positive feeling about the company or store they are visiting. Today's fabric and aluminum shade systems provide shelter or visibility and create environments that people love.

ADA SIGNAGE

Originally ADA (Americans With Disabilities Act) signage was 1 basic color and white text, but ADA signs no longer have to be boring.

Our 3D-UV ADA signage machinery allows for much more creative and outstanding signage.

ADA signs can now be considered the “Jewelry” of interior signage. Utilizing full color multi-surface printing on many types of materials, shapes and layers, this new process is limited only by ADA standards and your imagination.

-  Digital Signage, Messaging & Directories

COMPLIANCE

Today's codes require strict adherence to ADA laws. American's with disabilities act dictates where signs must go, their size, type of lettering and of course type II braille.

While the rules can be confusing we help many clients to simplify their signage requirements. We help companies comply while adding beautiful visuals to their interior and exterior wayfinding.
